

Retail & E-commerce Sales Performance and Customer Insights Analysis

This document outlines the operational and analytical business questions required for conducting a comprehensive Sales Performance and Customer Insights Analysis.

1. Sales Performance

- Which categories and sub-categories generate the highest sales and profit?
- Which products contribute the most and least to overall sales performance?
- Which regions, states, and cities generate the highest sales?
- How does sales performance vary across customer segments?

2. Customer Behaviour

- Which customer segments contribute the highest revenue and profit?
- Who are the top customers based on sales, profit, and order frequency?
- Which locations have the highest concentration of customers and sales?
- How does customer purchasing behaviour vary across product categories?

3. Profitability

- Which categories, sub-categories, and products are the most and least profitable?
- Which transactions or products generate negative or low profit?
- How does profit margin vary across categories, customer segments, and regions?
- Where are high sales not translating into high profitability?

4. Return Analysis

- Which products and categories have the highest return rates?
- What are the most common reasons for product returns?
- Which customer segments and regions contribute the highest number of returns?
- How do returns and refunds impact overall sales and profitability?
